## Suicide Resistant TV Enclosures.

### ProEnc's Ligature Resistant TV Enclosure

#### Steel welded construction

<http://www.lcdtvenclosure.com>

The non loop TV enclosure will accommodate both plasma and LCD screens for psychiatric units and correction facilities. Made from steel the enclosures bolt directly to the wall via the 4 mounting holes in the rear of the enclosure, a cable cut out is also present in the rear of the enclosure 12" wide x 8" high so cables can pass into the rear of the enclosure without having cables exposed.

Our patent pending solution has undergone 18 months of rigorous testing with the US Federal mental health department.

Each unit comes with an internal TV mount and the door is secured with 2 high security locks, the viewing window is made from Lexan and coated with an anti reflective coating.

Each unit comes complete with:

- Internal TV mount with a large cable cutout in the rear panel
- 2 High Security locks – others supply locks that can be opened with with a toothbrush!!
- 1/4" thick Lexan viewing window – others use 1/8"
- Thermostatic cooling system
- Sloped on all 4 sides – sloping top units can have material looped around them
- Full solid steel construction

Enclosures available in the following sizes:

- Code: NL26 For screens 17" to 26"
- Code: NL36 For screens 27" to 36"
- Code: NL46 For screens 37" to 46"
- Code: NL55 For screens 47" to 55"
- Code: NL65 For screens 56" to 65"
- Code: NL75 For screens 66" to 75"

ProEnc have over 5 years specifically manufacturing suicide resistant TV enclosures and are the preferred choice of the leading architects who advise mental health facilities on comfort and patient room design.

Our ligature resistant TV housings has been tested and passes all the tests needed to protect patients in psychiatric facilities, it is free from joints that can have material jammed into them. Its fully welded, again to prevent material being jammed into the joints and used as a ligature point. The advantage of a welded solution, is that the integral strength is around 79% more than a bolted construction, you do not have to assemble anything, a ProEnc suicide resistant TV enclosure is ready to go straight out the box, it even comes with a sophisticated cooling system.

When these suicide resistant TV enclosures are being installed, they are normally fitted at eye level in patient rooms, so they do have to be secure, checking out other items on the market, we and several architects are concerned, as these manufacturers are passing off products that do not pass the basic requirements for being installed in psychiatric units.

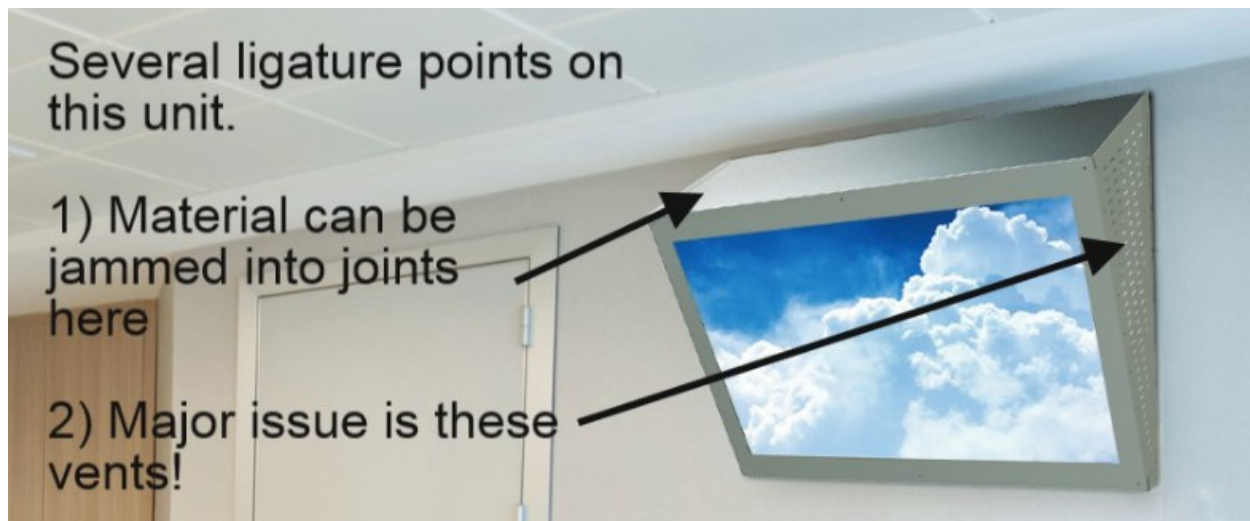

Check out the pictures on the following 3 pages.

### **Who installs a TV in a psychiatric facility this high?**

Another issue – note the possible ligature points in the vents on the side of the unit below.

Customer has to assemble it and this illustration shows bolt heads on the outside of the front face, another ligature issue!

So many resellers are taking products that they are 'told' are ligature resistant, when they are not. The most concerning is the unit below!

**What to look for when selecting an anti ligature TV enclosure.**

These vents are a potential ligature issue!

Paperclips can be pushed through and used to form a loop for self harming.

So are the joints at the front, material can be jammed in for self harm.

A plastic enclosure that breaks easily – checkout the video comparing this plastic enclosure against a ProEnc steel enclosure at <https://www.youtube.com/watch?v=KS33IsO3x-U> and the results of a simulated physical attack.

### Suicide Resistant Sloped Top TV Enclosure Comparison

Material can be jammed into the joints that form the anti ligature slope, creating a loop for self harming.

Remember it is the facilities legal responsibility and duty of care to use the correct product for the application in any psychiatric facility, this is why ProEnc are the leaders in manufacturing and
