

Antimicrobial TV Enclosure by ProEnc.

ProEnc's antimicrobial TV enclosure is now added to their growing solutions for the healthcare industry.

Now their protective flat screen TV enclosures for health care facilities are supplied with approved antimicrobial coatings, adding additional patient safety features to their product.

So what does antimicrobial TV enclosure means?

When we manufacture our protective TV housings for healthcare facilities, we coat them with a special coating that prevents microorganism building up and creating a health issue, it also adds a ultra-high protection to the stainless steel TV enclosure.

Antimicrobial is the phrase that describes an item that has the ability to resist microbe growth.

This enables our product to one of the most hygienic on the market, one coating will last the anti ligature TV enclosure's lifetime

ProEnc's protective TV enclosure.

As well as ProEnc manufacturing the most robust flat panel television enclosure on the market for mental health facilities, they also offer one of the most cost effective solutions. Now they offer this to their range of protective TV cases.

The TV housings are made in stainless steel and mild steel, so the customer can even choose the finish color of the mild steel enclosure. Unfortunately stainless steel does not coat very well.
