PROENC TV ENCLOSURE INSTALLATION INSTRUCTIONS.

****2 Man lift****

- 1) Mark the 4 holes in the corner of the enclosure and use them as a template to drill the wall with suitable fasteners.
- 2) Mount the enclosure to the wall with suitable fasteners.
- 3) Depending on the wall structure powering the enclosure; either cut holes in the rear of the enclosure to accommodate wall mounted electrical outlets or feed the power cables through the wall and through the cable cut-out in the rear of the enclosure and terminate the cables inside an electrical outlet within the enclosure, ideally at the bottom of the enclosure.
- 4) Fit the vertical tv brackets to the TVs vesa mounts and hang them on the horizontal TV frame and secure into position. The cable cut-out area has to be free from projections so the television sits vertically and flat against the horizontal frame.
- 5) Set the fan thermostat to below room temperature and plug into electrical outlets within the enclosure.
- 6) Fit door with hinges and lock with the keys. Ensuring the keys are kept safe.
- 7) Remove the plastic film from the viewing window.

If there are any questions contact Proenc before you install the enclosure/enclosures to ensure the best installation practices are met on the number below.
